▸ Raw ExifTool Output

I checked the **ocean.jpg** file using a tool called **exif.tools** to see if any info was hidden in the background. By looking through the file's metadata, I found a section called **"Comment."** Inside that part, the flag was written out directly as "THIS IS THE HIDDEN FLAG," which is how I found the first one.

2. Dog.jpg

```

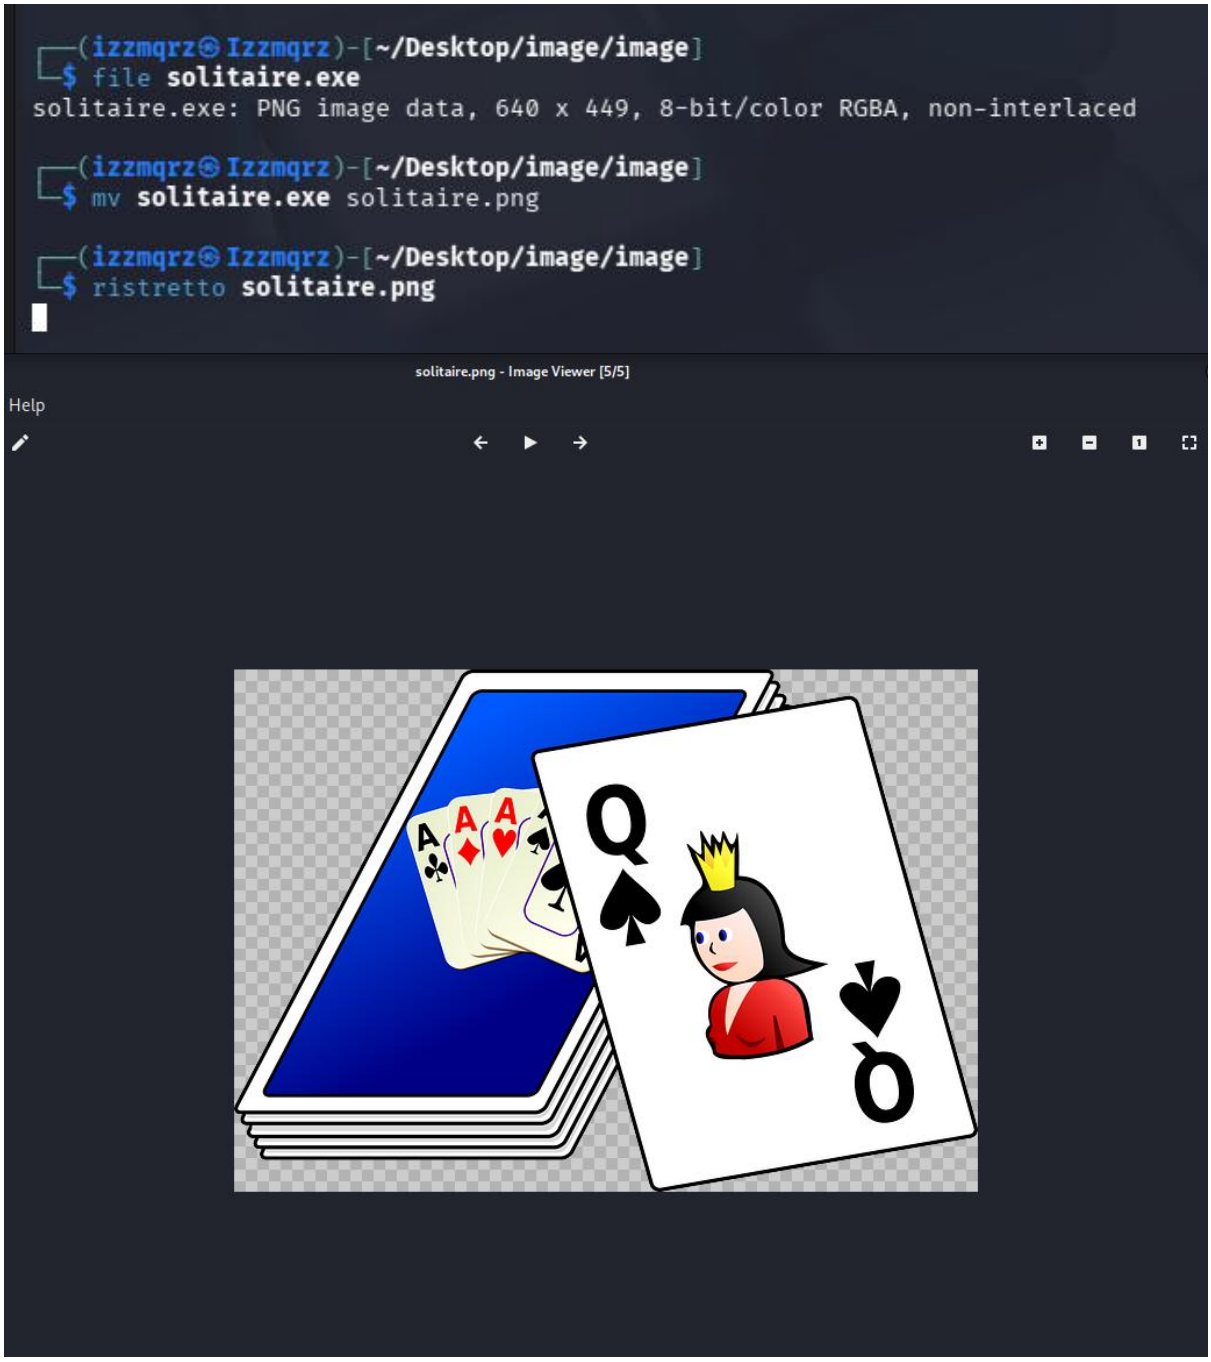
└─$ cat hidden_text.txt
THIS IS A HIDDEN FLAG

┌──(izzmqrz㉿Izzmqrz)-[~/Desktop/image/image/_dog.jpg.extracted]
└─$
```

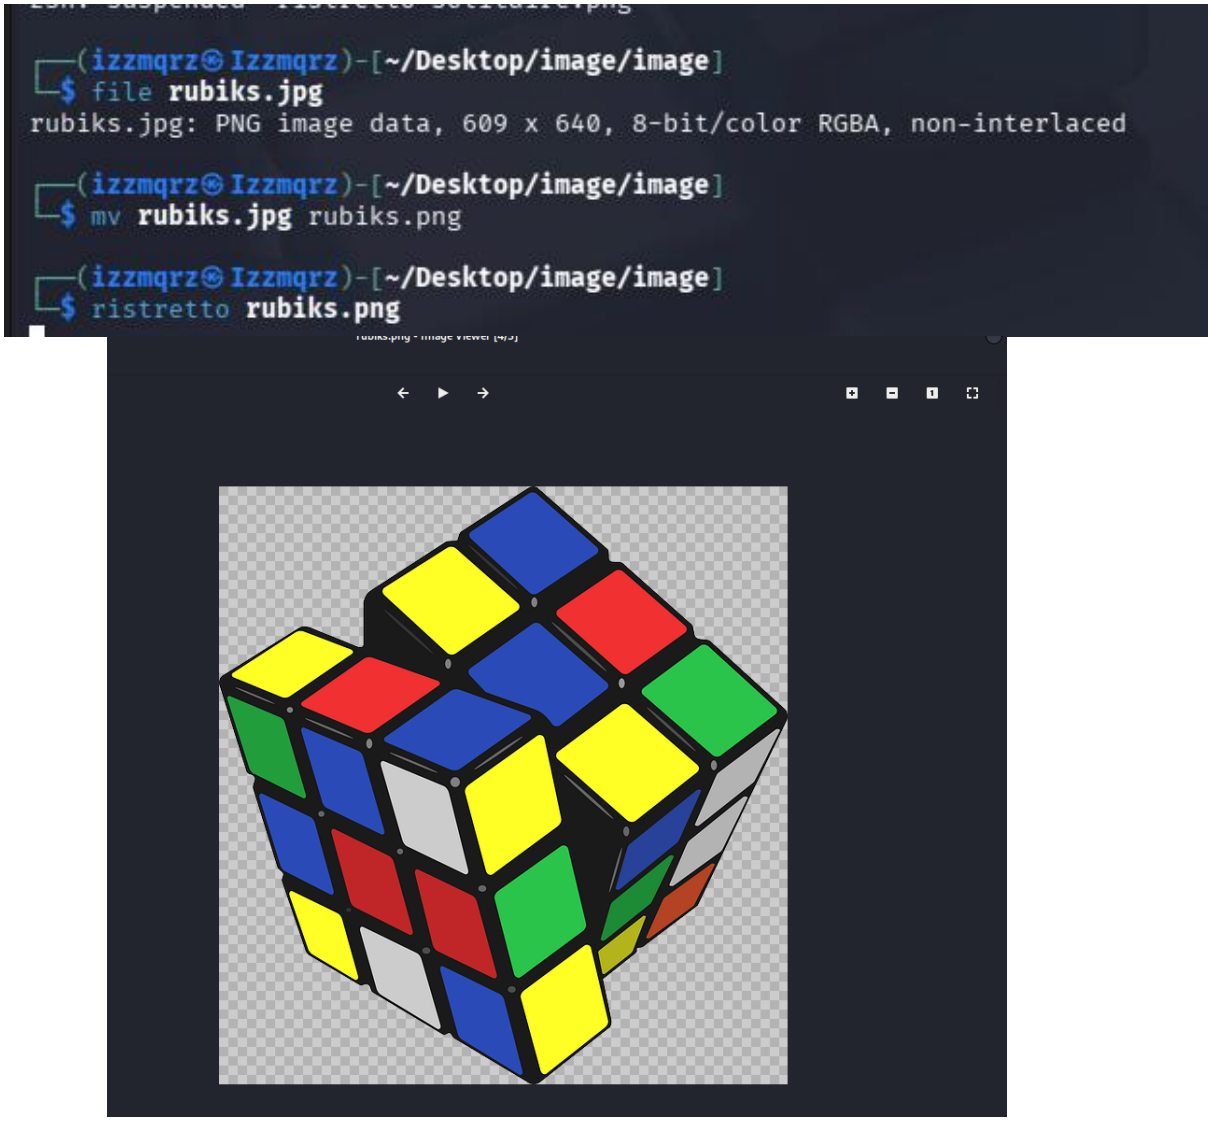
I used Kali Linux to check **dog.jpg**. I ran the **binwalk** command and found a hidden file called **hidden_text.txt** inside it. To get the file out, I used *binwalk -e* which created a new folder. I went into that folder and used the *cat* command to read the file. This showed the flag: **"THIS IS A HIDDEN FLAG"**.

3. Solitaire



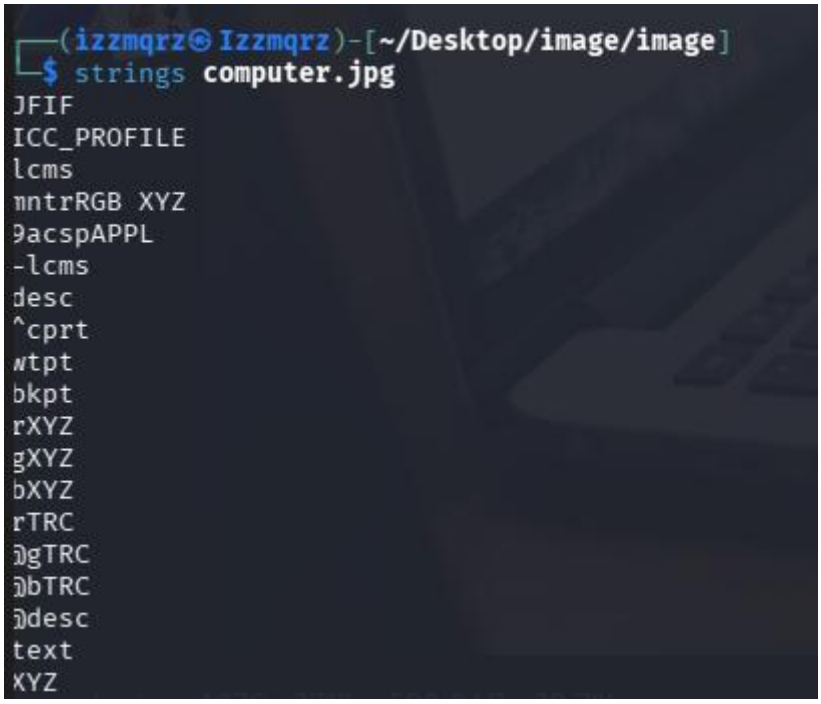
I checked the file **solitaire.exe** using the *file* command. Even though it looked like a program, the results showed it was actually a PNG image. I used the *mv* command to rename it to **solitaire.png** so it had the right extension. Finally, I opened it with **ristretto** to view the image of the cards.

4. Rubiks.png



I ran the *file* command on **rubiks.jpg** and discovered it was actually a PNG. I used *mv* to rename it to **rubiks.png** so the file extension was correct. Lastly, I used **ristretto** to open and view the image of the Rubik's Cube.

5. Computer.png



I used the **strings** command to look for readable text inside **computer.jpg**. To get a better look at the data, I also uploaded the file to an online **Strings Extractor** tool on dCode. This helped me find and analyze all the hidden text strings within the image.
